

Website Building: Basic Layout

HTML - Positioning

The following exercise contains the following subjects:

- Positioning

Instructions

We took the box from the previous ex

and added a title to the big box.

The HTML looks like this:

```
<body>
  <div id="outer">
    Box titles
    <div id="inner"></div>
  </div>
</body>
```

We want the small box to be positioned 10px underneath it.
Like this:

But we get this:

The small box is covering the title.

Fix this using the positions we've learned.

Note: the box will keep its 10px gap even if we change the font size:
