

Front-end development: Basics

JavaScript – more on data types

The following exercise contains the following subjects:

- data types

Instructions

1. Create a variable whose value holds a string.
2. Create a variable whose value holds a number.
3. Create a variable whose value holds an object.
4. Create a variable whose value holds a boolean.
5. Create a variable whose value holds null.
6. Create a variable whose value is undefined.
7. Create a variable whose value holds a symbol.

Console log the types of your variables.
