

# Website Building: Basic Layout

## CSS – href attribute

---

The following exercise contains the following subjects:

- before and after pseudo selectors

### Instructions

Create an HTML a tag that has a href attribute.

Create a CSS after pseudo-element from that a tag that displays the href's value.

For example like this:

Please visit this [website \(https://www.appleseeds.org.il/\)](https://www.appleseeds.org.il/) for more information.
