

Front-end development: Loops

JavaScript – compare two arrays

The following exercise contains the following subjects:

- for loop

Instructions

You are given two arrays:

```
const food = ["Noodle", "Pasta", "Ice-cream",  
"Meat", "Cucumber", "Olives"];  
const food1 = ["Fries", "Ice-cream", "Pizza",  
"Olives", "Hamburgers"];
```

Create a function that takes these two arrays as arguments.

Compare these two arrays using 2 for loops and return the items that are the same. If none are the same return false.
