

Backend: Node JS

Node JS – users.json

The following exercise contains the following subjects:

- ◆ Node JS
- ◆ Yargs
- ◆ json
- ◆ CRUD

Instructions

Practice makes perfect.

Lets create crud operations to manage users in a json file.

Create a CRUD application and store them in a users.json file that you are able to do the following operations:

1. **C**reate a user
2. **R**ead a user
3. **U**ppdate a user
4. **D**eleate a user

Each user needs at least the following:

1. Id
2. Name
3. Email

Use this [npm package](#) to create unique ids.

When reading, updating or deleting a user, you must only use their id to find them.

Ninja

A user is able to create a password.

A user is able to update their password.

Submit the file to Hive.
