

Front-end development: Basics

JavaScript – more on data types

The following exercise contains the following subjects:

data types

Instructions

- 1. Create a variable whose value holds a string.
- 2. Create a variable whose value holds a number.
- 3. Create a variable whose value holds an object.
- 4. Create a variable whose value holds a boolean.
- 5. Create a variable whose value holds null.
- 6. Create a variable whose value is undefined.
- 7. Create a variable whose value holds a symbol.

Console log the types of your variables.
