# Front-end development: Array

## JavaScript – fun with arrays

The following exercise contains the following subjects:

- Arrays

**Instructions**

1. Fill an array with 100 of the same object using the array fill method.
2. Create an array with numbers ranging from 1-100 using the Array.from method.
3. Convert only values of an object into one array.
4. Convert an array into one object.
5. Find out if an array is an array.
6. Copy an array.
   - Create a copy of an array that won't affect the original array if modified.
   - Create a copy of an array that will affect the original array if modified.
