Front-end development: Methods

JavaScript – last occurrence

The following exercise contains the following subjects:

- Methods

Instructions

you have this string:

```
const string = "The more you know, the more you
know that you don't know";
```

We want to get the index of the last occurrence of the word "you". It should give you 42.

You can solve this problem without the method indexOf. But if you can manage to do it also with indexOf you will get a cookie.
